Steel Grating:

Galvanized Steel Grating is widely used in most general industrial plants as well as commercial buildings. Welded Steel Grating has wide applications as walkways, platforms, safety barriers, drainage covers and ventilation grates. Steel Grating is also ideal for use as mezzanine decking since it supports the same loads as comparable solid flooring. More than that, its' cost saving openness maximizes the circulation of air, light, heat, water and sound, while promoting cleanliness.

Details of Steel Grate Decking:

Production Standard: BS4592-1-1995, ANSI/NAAMM(MBG531-88), YB/T4001.1-2007

Material: Carbon Steel, Stainless Steel (304 or 316)

Common specification of Galvanized Bar Grate:

	Bearing Bar	Cross Bar
Thickness	3mm-7mm	6mm, 8mm, etc.
Height	20mm-75mm	
Spacing	20mm, 25mm, 30mm, 40mm, 43mm, etc.	50mm, 100mm, etc.
Length	1m-7m or as requirement.	≤1.2m

Advantage:

Compared to Perforated Steel Sheet Safety Grating, galvanized grating is more better for industry where grease, oil and detergents create slippery or hazardous conditions. And The shape size is more flexible and can be customized according to the requirements of the workplace, circle shaped, fan shaped and other sizes. There is light weight and heavy duty.
